Robert Tubb's LAWN SEED MIXTURES

FOR THE DISCRIMINATING BUYER

The severe drought of last season, especially in the grass growing areas, created a great scarcity of the better lawn grasses resulting in considerable price increases in all parts of the country. Our No. 1 Formula has made such a fine reputation that we cannot bring ourselves to give in to the temptation to change it for the sake of maintaining the same price level. However, a comparison of the analysis of this fine mixture (given below) with other similar mixtures will show that our prices are still very reasonable for a mixture which ranks with the finest on the market.

ROBERT TUBB'S VEGETABLE SEEDS

OF THE HIGHEST QUALITY

Although we carry many more varieties than those listed in the following pages and shall be happy to supply any not catalogued, we believe these newer sorts, plus a few old varieties which, in our opinion, have not yet been improved upon, will give our customers the maximum yields and everything that could be desired in quality.

TREATED SEEDS

Much of our seed is treated by us at no extra cost with Spergon, Arasan or Ceresan. Experiments in recent years conducted by leading State Experimental Stations have proved that the treatment with these products protects the seed against cold damp weather and acts as a preventive against soil carried fungus diseases, thus resulting in healthier plants and heavier yields.

PLANTS

Typical seedlings and transplants of greenhouse Snapdragons.

Due to the increasing demand for plants we have made special arrangements with one of the country's largest growers of seedlings, with whom we have been dealing for a number of years, to have plants sent direct to our customers.

We have always found plants obtained from this source to be highly satisfactory, very well packed so that they invariably arrive in perfect condition. They are grown from seed sown in sterilized soil and whenever possible the seed is obtained direct from the originator.
